

Gili Lankanfushi

Gili Lankanfushi is widely considered to be the top resort in the Maldives, and for good reason. This stunning, 45-villa, eco-friendly resort just a 20-minute speedboat ride from the airport succeeds in delivering truly unpretentious, relaxed luxury. To further reduce their costs and focus more on sustainability, they retained CCC to conduct detailed Water, Waste and Energy Audits. The Waste Audit highlighted ways to maximise efficiency of material utilisation to reduce waste generation and identify means of reusing waste and implementing measures for proper disposal. The Water Audit highlighted areas of inefficient water usage and recommendations that were given to Gili Lankanfushi have saved them 30% of their total water consumption. The Energy Audit focused on Energy reduction methods that Gili Lankanfushi will need to implement in order to maintain a satisfactory level of energy efficiency. The findings of this Audit revealed that an estimated 15% saving could be achieved through these initiatives, which was approximately equivalent to a financial saving of USD 285,942 per annum.
